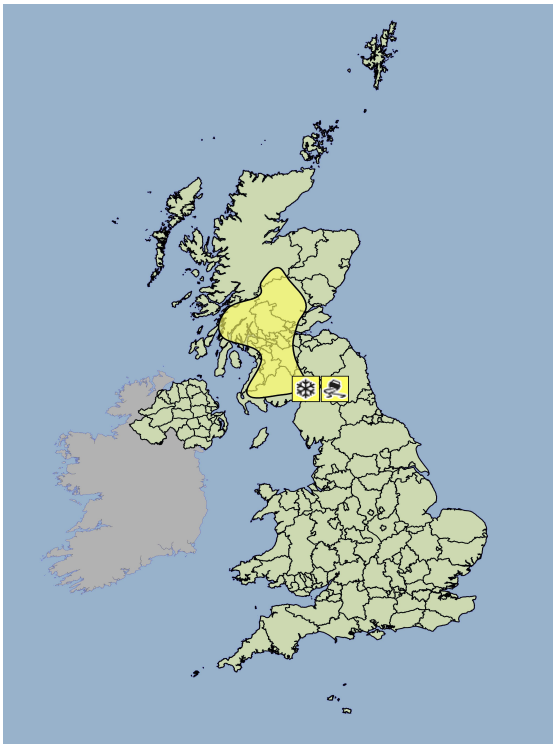
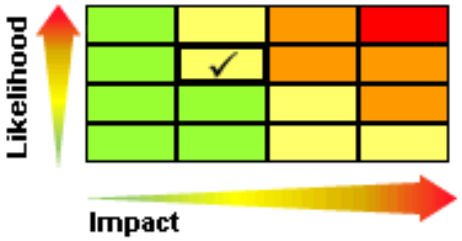
National Severe Weather Warning Service





Chief Forecasters Assessment
An occluding frontal system will edge very slowly across Scotland on Tuesday. Though heavy precipitation looks unlikely, it will readily fall as snow, particularly at higher levels. At low-level rain at times may fall onto subzero surfaces to give some icy stretches, mainly in the morning.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **05:00 on Tue, 20th Jan 2015** until **15:00 on Tue, 20th Jan 2015**

Outbreaks of sleet and snow, with rain along western coasts, will edge northeastwards across central and southern Scotland during Tuesday. These will fall on to cold surfaces leading to a risk of some icy stretches, especially across western Scotland in the morning. Upland routes through the Borders and the Southern Highland may see some periods of more persistent snow at times, with further accumulations of 5 to 10 cm possible on the highest routes.

The public are advised of the possible disruption to transport.
